

Planned construction characteristics:

1. Estimated total time duration anticipated for construction activities;

24 months

2. Estimated amount of demolition debris that will be disposed of off-site, and name/address of the disposal location if known;

All demolition debris will be disposed of off-site. Location not determined yet.

3. Estimated amount of demolition debris that will be recycled and reused on-site or off-site.

Unknown at this time, however anything that can be recycled will be done off-site.

4. Hours of construction activities (if different from the standards specified in the City's Municipal Code);

The construction hours should not deviate from those specified in the City's Municipal Code Section 10.28.040 (Construction Activity-Noise Regulations).

5. A description (including drawings, if needed) of any off-site improvements needed to implement the project;

Refer to project plans.

6. A list of construction equipment anticipated to be used during project construction (if this is not known, the construction-level air quality analysis can rely on model defaults); and

Excavators & Bulldozers for Grading, Tower Crane, Fork-lifts & Boom Lifts for Vertical Construction.

7. Total number of employees anticipated during construction (if known).

Approximately 50 to 80 workers on the project, however there will be periods with significantly less workers.
